***Course Description***

Process engineers often find themselves in situations where they are asked to deliver a process or product which meets certain specifications. Whenever we hear or read statements such as “Guaranteed to last for 5 years” or “This soda contains only 100 calories per 12 oz of serving”, there is always an experiment and data analysis exercise hidden in the background which certifies these claims or hypotheses. If you are interested in the world of statistical data inference, hypothesis testing and the theory of designing experiments, then this is the right class for you.

***Course Pre-Requisites / Co-Requisites***

None

***Course Objectives***

1. To provide exposure to statistical data inference and its utility for design and analysis of experiments related to process engineering.
2. To develop an understanding of common experimental design techniques and critical thinking needed for their application.
3. Learning to develop data driven hypotheses and check their statistical validity.

### **Online Course Recording**

Our class sessions may be audio visually recorded for students in the class to refer back and for enrolled students who are unable to attend live. Students who participate with their camera engaged or utilize a profile image are agreeing to have their video or image recorded. If you are unwilling to consent to have your profile or video image recorded, be sure to keep your camera off and do not use a profile image. Likewise, students who un-mute during class and participate orally are agreeing to have their voices recorded. If you are not willing to consent to have your voice recorded during class, you will need to keep your mute button activated and communicate exclusively using the "chat" feature, which allows students to type questions and comments live. The chat will not be recorded or shared. As in all courses, unauthorized recording and unauthorized sharing of recorded materials is prohibited.
